

ICA-XFG-206

RECIRCULATION AND MULTI-PIPE PROGRAMMING

COURSE PROSPECTUS

ICA-XFG-206 is 1-unit advanced, instructor-led course module that offers detailed exploration of the facilities, provided by both Tofino Native Architecture (TNA), Intel P4 compiler for Tofino, and Barefoot Runtime Interface (BRI) that can be used to implement complex, highly scalable P4 programs that require resources from more than one processing pipe.

This course is recommended to all data and control plane designers tasked with implementing these and similar features in their systems.

ICA-XFG-206 is a part of Intel® Connectivity Academy XFG course series and can be taken either in-person or online.

COURSE GOALS

The course introduces the participants to two important mechanisms: recirculation (the ability to send the packet from egress directly to ingress) and multi-pipe programming (the ability to run separate P4 programs on separate Tofino processing pipes) and discussed various use cases, such as the ability to increase the program scale, complexity, or both. The latter two usually require combining multi-pipe programming with recirculation using the approach, known as “folded pipe”, which is also discussed in detail and illustrated using relevant code examples.

Upon the completion of the course, the students will:

1. Understand the recirculation mechanism, its implementation in Tofino and TNA
2. Be able to reason about performance implication of recirculation.
3. Understand how to run different programs on different processing pipes of Tofino by combining two or more independently compiled P4 programs.
4. Be able to create multi-pipe programs by combining multiple individual `Pipeline()` packages and compiling them as a whole
5. Understand how to use folded pipe programs and run them on both the model and the real device.
6. Learn how to define bridged metadata using flexible headers and their importance in the multi-pipeline use case

DETAILED SCHEDULE

Each unit consists of a 2-hour-long lecture (presentation) with one break and is followed by the hands-on labs.

In online format, each unit is conducted on a separate day – please consult the [P4ica Calendar](#) for details. Both morning and evening (Pacific Time) sessions might be offered to accommodate students from different time zones.

When conducted in-person, each 8-hour day constitutes 2 units.

UNIT 1

- Introduction
- Recirculation basics. Achieving recirculation using port configuration and intrinsic metadata.
- Recirculation with the same program
- Running multiple programs on Tofino. The structure of the config file
- Understanding the folded pipe approach
- The challenges and the benefits of combining multiple `Pipeline()` packages
- Control plane implications of multi-pipe programming

This course is most suitable for data plane designers tasked with implementing complex P4 programs on Intel Tofino™ ASIC family devices.

PRE-REQUISITES

- Successful completion of ICA-XFG-101
- Knowledge of Python language
- General understanding of Linux and ability to use it as a development system.
- When taken online good and reliable Internet access for both online lectures and VM access is a must.
- When taken in-person, each participant is expected to have a laptop with a standard browser. No other software is required.

HOW TO REGISTER

Class dates and times are announced on the [P4ica Calendar Page](#) ahead of time and you can register right on the site using the credit card or PayPal to pay for the tickets. The tickets can also be purchased through our partner, [STORDIS](#), who provide additional services such as convenient invoicing or lodging booking for in-person courses. Please, contact your STORDIS sales representative for more details.

Please, note that most courses require all the participants to have a valid NDA and SLA (SLACA for academic and research organizations) in place. Their existence will be verified after the purchase, and you will be notified if additional steps are required, or the ticket will be refunded.

LOGISTICS

ONLINE COURSES

To attend an online presentation, you will need to create a **free Zoom account, associated with your work email address**. Upon the registration, you will receive a link to the online event. You will also receive invitations to establish accounts on Slack and the [P4ica Support Portal](#) for lab support and materials access, also **associated with your work email address**.

A high-speed internet connection is required to attend the online presentation. Call-in numbers for higher voice quality might be provided, depending on the region. Please, connect to the online meeting 5-10 minutes before the start to work out all potential connection problems.

All necessary materials, including the presentation PDFs and lab exercises will be available through the [P4ica Support Portal](#) a day before the start of the class. We highly recommend that you print the presentation PDFs and use them to take notes. Alternatively, these presentations can be loaded on a tablet, where the notes can be taken with an electronic pen.

The information about the lab Virtual Machines will be provided at the end of the first lecture. VMs will be kept running throughout the duration of the course and shut down 48 hours after the end of the last class. Additional time can be purchased as a ticket add-on.

IN-PERSON COURSES

The location address and the arrival time can be found on the registration site and will be emailed to you as well. You are responsible for your own lodging and transportation; Academy staff will be happy to provide some recommendations.

You will receive invitations to establish accounts on Slack and the [Academy Support Portal](#) for lab support and materials access, also **associated with your work email address**.

All necessary materials will be printed for you and are yours to take notes and take them back home. You will also get a lifetime access to the updated versions of these materials on the Academy Support Portal.

The information about the lab Virtual Machines will be provided at the end of the lecture. VMs will be kept running throughout the duration of the course and shut down 48 hours after the end of the last class. Additional time can be purchased as a ticket add-on.

IMPORTANT NOTES

P4ica, LTD is an independent training and consulting company. It delivers Intel Connectivity Academy classes under the special license from Intel, using approved materials and lab exercises. It also acts as a custodian for the Academy archives, thereby providing the alumni lifetime access to the class materials.

Intel® P4 Studio SDE is a software product, developed independently from the software, available via p4.org. Some components of the SDE were contributed by Intel to p4.org, others rely on the code from p4.org, but the goals of the projects, the tools, and the workflows are different. P4.org software is a community-supported project with many resources freely available. This class covers Intel® P4 Studio SDE and **not** p4.org software. Specifically, not covered are the Behavioral Model (BMv2), v1 model and PSA P4₁₆ architectures and neither is P4Runtime protocol.

P4₁₆ compiler for Intel® Tofino™ and Intel® Switch Runtime Interface APIs are in active development as is the course module material. While Intel® Connectivity Academy team strives to introduce Intel customers to the leading-edge software, bugs, errors, and omissions may occur. The later versions of these course modules might significantly differ from the earlier ones.

The course module material covers both Tofino and Tofino2 devices. Relevant enhancements and differences are emphasized and discussed whenever applicable.

The availability of each course is announced separately. Please, visit [P4ica Calendar Page](#) for more information.

The online presentations may be recorded and may be published, in whole or in part, in various media, including print, audio and video formats without further notice. If you do not want to participate, you may choose to either keep your audio and video connections muted or turned off or leave the call. By choosing to remain, you are consenting to the recording of the session.
