

SwitchOP Service

SwitchOP Service is designed to help you understand the technology of a Bare Metal Switch Platform and how it can be leveraged together with different available Network Operating Systems (NOS), as well as configuring the systems to bring them into an operation state.

The session covers all steps required to configure the newly purchased system with a base configuration as per your request:

- Connecting the System via a serial interface
- Introduction to ONIE and how it is used to trigger the installation
- Configuration of the ONIE interfaces and preparation to install the NOS
- Installation of the NOS image
- First time connect of the NOS
- Licensing the NOS
- Topology design support
- Introduction to and configuration of the different NOS

The Service comprises **5 hours** of STORDIS qualified Engineer's time, which can be also used for other tasks.
